

Cellebrite Patents its Remote Mobile Collection Capabilities for Businesses

September 24, 2024 at 8:30 AM EDT

Remote Mobile Collection enables faster device access and analysis, saving corporate investigators time and money

TYSONS CORNER, Va. and PETAH TIKVA, Israel, Sept. 24, 2024 (GLOBE NEWSWIRE) -- Cellebrite (Nasdaq: CLBT), a global leader in premier Digital Investigative solutions for the public and private sectors, announced today the patent for Remote Mobile Collection, which equips corporate investigators with immediate, targeted remote data collection – saving them time and money. In today’s hybrid work environment, this newly patented technology – available in Cellebrite’s SaaS platforms [Endpoint Mobile Now](#) and [Endpoint Inspector](#) – delivers high value, supporting rapid data collection and offers greater convenience to the device’s consenting owner, who can keep it during collection rather than return it to a corporate office.

According to Cellebrite’s 2024 Industry Trends Survey, 83% of respondents said they rely on multiple tools for data collection. Remote Mobile Collection allows businesses flexibility to quickly collect from multiple devices at the same time, without disrupting day-to-day operations. These capabilities are available to the private sector, improving data accessibility and turnaround time – providing results within hours.

“We are proud to earn the patent for our Remote Mobile Collection capabilities. This technology underscores our commitment to efficiently modernize the workflow of our private sector customers,” said Ronnen Armon, Chief Product and Technologies Officer at Cellebrite. “This new era for remote collection enables us to continue innovating solutions that deliver unparalleled experiences for the businesses we serve.”
